

Installation of the DEDRA 400 Concave Grating D400 class

Installation

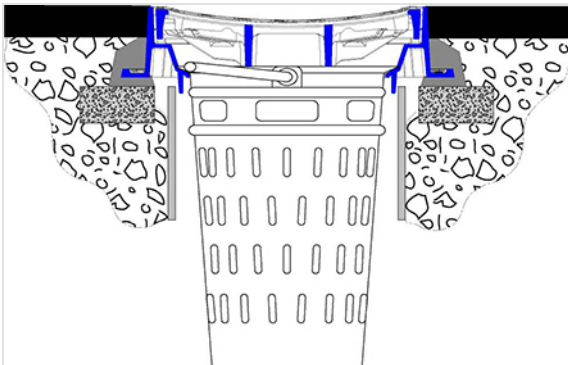

The alveolate broad flanges of DEDRA 400 gratings enable to obtain a good bedding as well as a reduced transmission of the loads to the structure located under the gratings.

Two types of frame enable to choose the version most adapted according to the installation confines:

- Frame with clear opening of 400 mm
- Frame with mudpan bearing plate and centring studs for 400 ND PVC pipes.

Implementation of the mudpan

The information on this sketch is, to the best of our knowledge correct at the time of printing. However Saint-Gobain are constantly looking at ways of improving their products and services therefore reserve the right to change without prior notice, any of the data shown.
